

Codebook and Data Description
“Conscription and Crime: Evidence from the Argentine Draft Lottery.”
Sebastián Galiani, Martín Rossi, and Ernesto Schargrotsky

Datasets

We include the following datasets:

- Crime.dta;
- BaseA.dta;
- BaseB.dta;
- BaseC.dta;
- Compliers.dta.

The datasets merge information from various sources. 1) A first dataset on criminal participation provided by the Argentine Ministry of Justice that contains the year of birth and the last three digits of the national ID number for all men who have any criminal record in the adult justice system during the period 1934–2005; 2) A second database on criminal participation provided by the Argentine Ministry of Justice that contains the year of birth, the last three digits of ID, and the types of crime committed for all men who have gone through a criminal process in the adult civil justice system during the period 2000 to 2005; 3) *Sistema Integrado de Jubilaciones y Pensiones* (SIJP) as of October of 2004; 4) *Encuesta Permanente de Hogares*, INDEC.

More detail on the datasets, and on the data collection procedures and definitions, is included in the text of the paper.

Do Files

The analysis was done in Stata. The do file named `Conscription&Crime.do` produces all the results in the paper and the appendix. All results are clearly commented in the do file with the Table number (or footnote, or specific comment) to which they refer (if there is any confusion, please contact the authors).
